

10-11-2006

CEDRAT and **ADAPTED SOLUTIONS** announce a joint agreement. With this strategic partnership CEDRAT increases its competitiveness in the field of simulation software and ADAPTED SOLUTIONS innovative software solution in the field of system design and analysis, thereby completing the range of simulation products for electrical engineering tasks offered by Grenoble based CEDRAT.

Bruno RIBARD, Chief Executive Officer of CEDRAT describes his delight at the move: "I'm very happy about the agreement between ADAPTED SOLUTIONS and CEDRAT. This will allow us to strengthen the lead position of our group in the field of the modelling of electrical systems. Now we are able to offer a complete solution for companies developing mechatronic systems – from the function design up to the system integration."

Marko SCHMIDT and Thomas BARUCKI, founders and directors of ADAPTED SOLUTIONS, share Mr. RIBARD's delight: "To us the most important issue is the opportunity to develop our software within the frame of a comprehensive software family and with competent international partners. This agreement provides ADAPTED SOLUTIONS with the resources to consolidate the company and expand our product range."

+ + + About Portunus

Portunus offers a combination of different modelling approaches as networks, block diagrams and state machines to facilitate the investigation of systems behaviour. Possible applications range from power supplies, power electronic circuits and drive systems up to controls and automotive components. In addition to the analysis of electrical behaviour, Portunus allows the evaluation of mechanical and thermal properties.

+ + + About ADAPTED SOLUTIONS

Since its foundation in 2003 ADAPTED SOLUTIONS has developed and marketed a number of simulation products. Beside general solutions such as Portunus, the company provides application-specific solutions which are developed in close co-operation with customers.

+ + + About CEDRAT

The aim of the CEDRAT Group is to propose innovative solutions in the electrical and mechatronic fields, from the development of software tools to the study, conception and production of systems. Well-known for its FLUX software, and European leader in the simulation of low frequency electromagnetic phenomena, the group offers a full range of software solutions for electrical engineering.
